In 1936, a film called “Reefer Madness” was released to scare parents and political leaders of the horrors and dangers of marijuana use among your people. Today, “Reefer Madness” has returned with an organized effort to legalize marijuana. The Good is that marijuana has many medicinal properties and is efficacious in the treatment of several physical and psychological disorders. The Bad is that it has very negative implications for teens and those who are at risk for the development of cannabis use disorder. The Ugly is that marijuana has a major negative effect on the developing teen brain and the collective IQ of our nation. Marijuana is Good, Bad and Ugly because its effects can range from health, death to taxes. The legalization of marijuana—whether medical, decriminalization or legal—is sending mixed messages to our teens. Is it like alcohol, for adults only? Is it addictive? Just because it may be legal in some states doesn’t mean marijuana is safe to use, especially by teens.

This workshop is designed to provide some of the latest research on marijuana—from a brief historical overview to current medical uses to treatment and recovery techniques.
